iglide® bar stock - Table of Contents

For free design

iglide® A160 –
high media
resistant, low cost
material

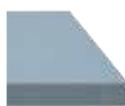

iglide® A180 –
the general purpose
solution for the
medical and food
industries (FDA
compliant)

iglide® A181 –
the food grade
material, compliant
with FDA specifica-
tions and EC
Directive 10/2011

iglide® A350 –
the FDA-compliant
high-temperature
material

iglide® A350 –
as plate material

iglide® A500 –
FDA compliant, for
high temperatures
up to 482°F

iglide® C500 –
Extremely media
resistant (hydrogen
peroxide), for
temperatures up to
482°F

iglide® F2 –
used to prevent
electrostatic
charges

iglide® H1 –
for special plain
bearings and sliding
elements under
extreme conditions

iglide® HSD350 –
All around bearing
that can be sterilized
in an autoclave

iglide® J –
the general purpose
solution with optimum
wear resistance and
outstanding efficiency

iglide® J –
as a tube for
larger diameters

iglide® J –
as plate material

iglide® JB –
Extreme wear
resistance

iglide® JB –
Extreme wear
resistance as plate
material

iglide® J2 –
versatile and
cost effective

iglide® J3 –
high service life,
low coefficients of
friction

iglide® J4 –
wear resistant
and cost effective

iglide® J200 –
specially for
aluminum shafts

iglide® J260 –
ideal for plastic shafts

iglide® J350 –
the high temperature
material

iglide® P210 –
the material for high
speeds at low loads

iglide® R –
low cost material

iglide® M250 –
vibration dampening

iglide® T220 –
for the tobacco
industry

iglide® UW160 –
for continuous use
in liquid media

iglide® L280 (W300) –
the material for
high load
requirements

iglide® T500 (X)* –
the media-resistant
high-temperature
material

*The part number X is the European
equivalent of the T500 material
and the part number W300 is the European
equivalent of the L280 material

iglide® bar stock - Advantages

iglide® in one piece

Self-lubricating iglide® bar stock enables you to freely design all kinds of maintenance free sliding elements and bearings. The broad range of iglide® plain bearing materials enables you to match the bearing material with the best friction and wear values for the shaft.

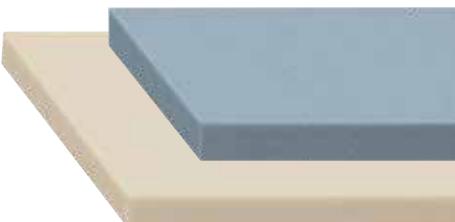

Over 20 iglide® materials are currently available for selection as round bar stock. Additional iglide® plain bearing materials will follow. Also available are iglide materials in the form of tubes and plates.

In addition to the bar stock for independent processing, we will also gladly produce plain bearings, sliding elements and pads in all forms. We can even provide urgent prototypes in a matter of days.

iglide® round bar stock

iglide® plates

iglide® tubes

Mechanical processing and cutting

Service life calculation

► www.igus.com/barstock-expert

Temperature range:

-58°F (-50°C) up to 194°F (+90°C)
for standard iglide® J
-148°F (-100°C) up to 482°F (+250 °C)
(depending on material)

igus® is constantly expanding its range of available materials and dimensions. Check the current stock online at:

► www.igus.com/barstock

20 plus materials

Round bars: Ø 10–100 mm

Plate thickness: ↓ 2–40 mm

Tubes: up to 150 mm outer Ø

Available from stock

Detailed information about delivery times can be found online. Further materials and dimensions on request.

In addition to bar stock, we will also gladly offer machining to print specifications.

iglide® bar stock - Processing information

Processing information for iglide® bar stock

General information for achieving the best possible results when processing iglide® bar stock:

- Use tools made of high-speed steels (HSS) and hard metal (HM)
- Always ensure the tools are extremely sharp and in perfect condition

- Due to greater thermal expansion compared to metals and the dimensional changes that occur as a result of moisture absorption, larger production tolerances are required for plastics than for metal parts
- If large material volumes are to be machined, interim tempering should be used before the refined finishing stage in order to reduce retrospective warping.

	Sawing	Turning	Milling	Drilling
Tool material	HM with alternate teeth or trapezoidal flat teeth	HSS	HSS	HSS
Clearance angle	5–30°	2–10°	2–30°	3–16°
Rake angle	0–15°	0–8°	0–15°	5–30°
Tooth pitch	2–14 mm	–	–	–
Setting angle	–	45–60°	–	–
Tip angle	–	–	–	90–130°
Cutting speed	max. 300 m/min.	100–500 m/min.	80–500 m/min.	20–200 m/min.
Feed rate	–	0.05–0.5 mm/rpm	0.02–0.3 mm/rpm	

Table: General processing information

Tempering

Interim tempering reduces inner tensions caused by the machining process, and thus creates narrower tolerances. In the end, the optimum values depend on the volume of material machined, the machining parameters and the geometric design of the end product, which should be determined by tests.

As the plastic has low thermal conductivity, the plastic bar stock has to be heated slowly.

When possible, the entire bar stock should be evenly heated. Therefore, it is important to achieve the appropriate temperatures for material tempering indicated below over a period of 3 – 4 hours by slowly heating the part from room temperature. Depending on the thickness of the part, this temperature should be maintained for 1 hour per cm of wall thickness.

If the machined part cools too quickly, tension can once again be induced. This is avoided by using a slow cooling process with a maximum reduction of 68°F (20 °C) per hour until room temperature is reached.

Tempering temperatures	iglide® materials
248°F (+120 °C)	A180, A181, J, J2, M250 J3, J4, J200, R
266°F (+130 °C)	J260
356°F (+180 °C)	F2, P210, T220, L280
392°F (+200 °C)	A350, H1, J350
428°F (+220 °C)	T500 ¹¹¹⁾

¹¹¹⁾ In the case of iglide® T500, the 428°F (220 °C) per cm of wall thickness must be maintained for 2 hours.

iglide® bar stock - Product range

iglide® bar stock from stock

The range of iglide® bar stock products is growing continue! iglide® bar stock products bridge the gap between initial test samples and the injection-molded parts for large volume. Ideal for special solutions and small-series requirements as well.

Find & compare semi-finished products

This material finder helps you find the right iglide® material for your project with a few clicks!

► www.igus.com/barstock-finder

Calculate lifetime of semi-finished products

Quick calculation of the service life of your iglide® semi-finished product.

speedicut – rapid special part production

speedicut is the mechanical production of iglide® bar stock in line with your drawings and specifications.

Before submitting an online request for the mechanical production of your desired geometric design, you can use the material finder or the service life calculation program to filter materials and find the right one for your application. If you would like our assistance in choosing the right material with the optimum friction and wear values, please do not hesitate to contact us.

We divide mechanical processing into two categories:

- Production of all custom geometric designs in the form of plain bearings, sliding elements and pads in line with your drawing and with the standard tolerances for plastics.
- Production of iglide® plain bearings and thrust washers in custom dimensions in line with igus® standard tolerances. You do not need to create a drawing for this type of processing.

Speed: if required, we are able to produce small quantities within a matter of days. If you need prototypes for your urgent projects extremely quickly, please contact us. Depending on their complexity and precision, our rapid delivery service can supply parts with a delivery time of as little as 3 days.

Quick inquiry

Tell us what material you would like your part made of, and upload a 3D model (preferably a STEP file).

Query:

3D model of your part

You can upload files up to a total volume of about 10 MB.

File 1: Dimension
File 2: Geometrie
File 3: Schablone
File 4: Prototyp
File 5: Drehplatte

9001:2008

igus® is certified in accordance with ISO 9001:2008 and ISO/TS 16949:2009 in the field of energy supply systems, cables and harnessing, as well as plastic bearings.
